

ASSIGNMENT NO 1

FA19-BSE-026

OCTOBER 9, 2021
MUHAMMAD JAWAD HASSAN
SOFTWARE REQUIREMENT ENGINEERING

Problem statements of tailor management system

Element	Description
Problem	Use of paper to record the data of client in shop. Multiple notebooks are created to record multiple client data.
Affect	By this problem, owner is affected badly. He has to remember on which notebook he writes the data of the specify client. If the owner went away so that he can't find out where the data is record. Overwriting also creating the confusion for the owner.
Result	By this problem after owner shop work can't figure out where the data is record. If the owner forgets the where he writes the data so that it creates data redundancy. Updating and removing the data is also a big problem for the owner. He has the overwrite the new record on the old record which rise the lack of effectiveness in the record.
Benefits of solution	After getting software, first of all there is a central database. Owner just update and remove on just on click. Now he can search data on just writing the name or number of clients. This software works fast and effectively.
